

- How much memory?
- Two main types of memory
 - RAM
 - ROM
- CPU
- Bus

How much memory?

- a bit is a binary digit that can have the value 0 or 1.
- A nibble is half a byte, or 4 bits.
- A byte is defined as 8 bits.
- A word is two bytes, or 16 bits.
- A kilobyte (KB) is 2^{10} bytes, which is 1024 bytes.
- A megabyte (MB) is 2^{20} bytes or 1024 KB.
- A gigabyte (GB) is 2^{30} bytes or 1024 MB .
- A terabyte (TB) is 2^{40} bytes or 1024 GB.

Two main types of memory

RAM

(Random Access Memory) :

- Volatile
- read and write memory
- Used by computer as temporary data for programs and data in running

ROM

(Read Only Memory) :

- Non-Volatile
- Contains data and programs that's essential for operation .

CPU

or Central processing unit , brain of computer.

It's function to execute process information stored in memory .

Bus

Common group of wires that interconnecting many components in computer system .
